Alheembouw is a Belgian construction company based in Staden, founded in 1970. As a general contractor and project developer, it specializes in both new constructions and renovations across various sectors, including industrial facilities, offices, schools, healthcare institutions, and residential buildings.

The company is recognized for its high-quality construction standards and customer-centric approach. It emphasizes transparent communication, short decision-making lines, and a team of skilled professionals to deliver projects that meet and often exceed client expectations.

Alheembouw holds several certifications, such as ISO 9001 for quality management, ISO 14001 for environmental management, and ISO 45001 for occupational health and safety. These attest to its commitment to quality, safety, and environmental responsibility.

With a workforce of approximately 180 full-time employees, Alheembouw continues to play a significant role in Belgium's construction industry.

Alheembouw is committed to sustainability in various ways, including nature restoration as one of its initiatives. The company actively integrates environmentally friendly practices into its projects, aiming to minimize ecological impact and contribute positively to natural habitats.

Reforestation in Belgium

📍 Belgium

🌳 2474 trees planted

Thousands of hectares of forests are threatened by climate change, pests, and diseases in Belgium. That is why we, together with Sylva Nova, decided to give the forest ecosystem in Belgium a hand as well. We have two project types: 1) Additional forest: We are planting new forests on neglected land or agricultural land. 2) Non-additional forest: We restore existing forests and make them more resilient. In Belgium and Europe in general, we do not always have new land available for forests. This is caused by the fragmentation of ownership and because of the competition for land. Important to notice is that we never plant after voluntary harvesting (clear-cutting). There is only restoration after a storm, pests, diseases, forest fires, ... Our projects in Belgium always provide added value to the forest in terms of the environment but also help the other functions of the forests, such as the social functions, the CO₂-sequestration, and the landscape. The tree species that we plant in Belgium are diversified tree species that are adapted to the local conditions. We select the species based on the soil, climate conditions, global warming, etc. This ensures that we make a maximum impact. Additionally, the projects exist out of planting the trees but also include monitoring visits to ensure that the plants are recovering well. With the help of a "management plan", there is more involvement by the forester. We are, therefore, sure that they are participating in a serious project that is treated in a sustainable and respectful way.

Care for communities

At Go Forest, we don't just plant trees. We engage in much more, such as ensuring sustainable support for local communities. We do so by using the UN Sustainable Development Goals, which serve as a blueprint for peace and prosperity for people and the planet, now and in the future. Depending on the region and the project, you'll be supporting different SDGs.
