## Reforestation in the Magamba Nature Forest Reserve - plot I

 30 trees planted

The Magamba Nature Forest Reserve has suffered several wildfires which were caused by human economic activities, such as local honey harvesting practices and the search for fuel wood. The reserve is important for biodiversity conservation, enhancing eco-tourism, and the water supply of many villages. This project is going to be conducted at Nkundei Village which is among the 21 villages surrounding the Magamba Nature Forest Reserve. At this site, the people from Nkundei village planted 2035 trees in November 2023 and 3375 trees in April/May 2024. The Belgian team of Go Forest was also at the field during the second planting activities in April. In total, we planted 5410 trees with the aim to restore the loss of biodiversity and regain the nature of the Magamba Nature Forest Reserve. We are planting more than 11 different indigenous tree species to introduce as much diversity as possible. The trees will be maintained and monitored for 5 years and every tree that dies within this period, will be replaced by a new one. The most important maintenance activity is the clearing of ferns!

## Care for communities

At Go Forest, we don't just plant trees. We engage in much more, such as ensuring sustainable support for local communities. We do so by using the UN Sustainable Development Goals, which serve as a blueprint for peace and prosperity for people and the planet, now and in the future. Depending on the region and the project, you'll be supporting different SDGs.
