## Reforestation and agroforestry in Tanzania

📍 Magamba Nature Forest Reserve, Tanzania

🌳 35 trees planted

In cooperation with the Changamoto Youth Development Organization, we want to restore forests in the Magamba Nature Forest Reserve that were burnt down in the past. The planting, maintenance, and monitoring are done by the local communities, making sure the project not only has ecological, but also social and economic positive impacts. The Magamba Nature Forest Reserve is the only nature forest reserve located in the Western Usambara Mountains, found between Lushoto District Council and Korogwe District Council. This forest has suffered several wildfires which were caused by human economic activities, such as local honey harvesting practices and the search for fuel wood. The reserve is important for biodiversity conservation, enhancing eco-tourism, and the water supply of many villages. This project is going to be conducted at Nkundei Village which is among the 21 villages surrounding the Magamba Nature Forest Reserve. The aim of the reforestation project is to restore the loss of biodiversity and regain the nature of the Magamba Nature Forest Reserve by planting new trees. We are planting more than 11 different indigenous tree species to introduce as much diversity as possible. The planting of indigenous tree species happens during the rainy seasons: from March to April and from October to November. In this project, we highlight the importance of local involvement. That's why for every reforestation tree in the Magamba Nature Forest Reserve, we also support one agroforestry tree in the local community farms. We believe this balanced allocation will significantly amplify the positive outcomes of our project and drive more substantial and sustainable change.

## Care for communities

At Go Forest, we don't just plant trees. We engage in much more, such as ensuring sustainable support for local communities. We do so by using the UN Sustainable Development Goals, which serve as a blueprint for peace and prosperity for people and the planet, now and in the future. Depending on the region and the project, you'll be supporting different SDGs.
